

## Tiller et al's Research vs. Today's Establishment Science Research

- At an overly simplistic level, for the past several hundred years, establishment science has looked at nature via the lens of a fairly simple reaction equation

with each quality being convertible to the other via the well known relationship  $E = mc^2$ , attributed to Einstein, where  $c$  is the velocity of EM light,  $m$  is mass and  $E$  is energy.

- Our scientific research, which we call psychoenergetic science is an attempt to expand this picture of nature to deal with the next more complex reaction equation

with each unique quality being somehow convertible, one to the other.

- Unfortunately, establishment science, for the past ~400 years, has held the unstated assumption that "*no human qualities of consciousness, intention, emotion, mind or spirit can significantly influence a well-designed target experiment in physical reality.*"
- A byproduct of this unstated assumption is that most of the world has come to believe that there are no higher dimensions in nature than spacetime, that nothing can travel faster than the speed of EM light and that the four well-known and accepted fundamental forces of gravity, electromagnetism, the short-range nuclear force and the long-range nuclear force are all there is. This has led to the very materialistic society that we presently live in and that we humans are nothing more than this!
- To test this unstated assumption of establishment science, we set up three carefully designed target experiments to test the outcomes of four separate, well specified intentions. The first target experiment dealt with an inorganic material - water. The second dealt with an in vitro organic material which is a human liver enzyme while the third dealt with an in vivo living system, fruit fly larvae.
- The way in which we brought human consciousness into the experiments was to take two, identical, low tech electrical devices in black plastic cases, ~ 7" x 3" x 1" in size, and set one aside as a **control**. The other was set on a tabletop around which 4 well-qualified meditators sat and they imprinted a specific mental intention into that particular black box during a meditation session of ~1 hour long. Eventually we learned that it was necessary to both wrap the black box in aluminum foil and store it in an electrically grounded Faraday cage in order to keep the mental imprint from leaking

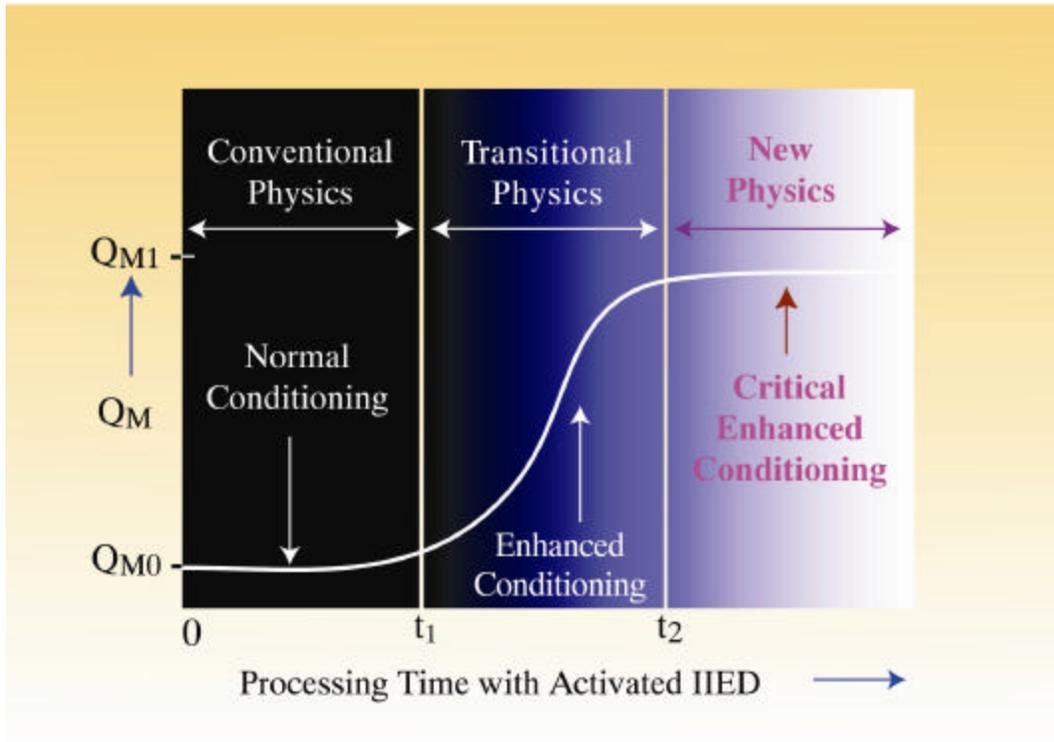

away. In this way the mental imprint could be retained in the treated device, now called an IIED (intention imprinted electrical device) for ~3 to 6 months so it became possible to do some careful experiments with such devices.

- Our procedure was, first, to set up the particular target experiment, in a laboratory in Minnesota that we were allowed to use, and continuously gather background data. second, we took the particular IIED out of its storage location, in the Stanford area of California, and shipped it via FedEx to the Minnesota laboratory. There, we placed it in the laboratory within ~1 foot of the target experiment, plugged it into a wall electrical outlet and switched it on. The total electrical power radiated from this IIED was less than one millionth of a watt.

One & three oscillator IIEDs  
with power converter

- Within 1 to 3 months, the equipment measurement for the particular target experiment had begun to change from the normal background values in the direction specified by the intention and gradually leveled off near the magnitude of change specified by the intention imprinted into the IIED. All of our three target experiments were robustly successful. See next figure.

- The particular target experiment that we have had replicated by others in 8 U.S. laboratories and 2 European laboratories is the one dealing with water so let's talk about that one:

In this case, Part A was

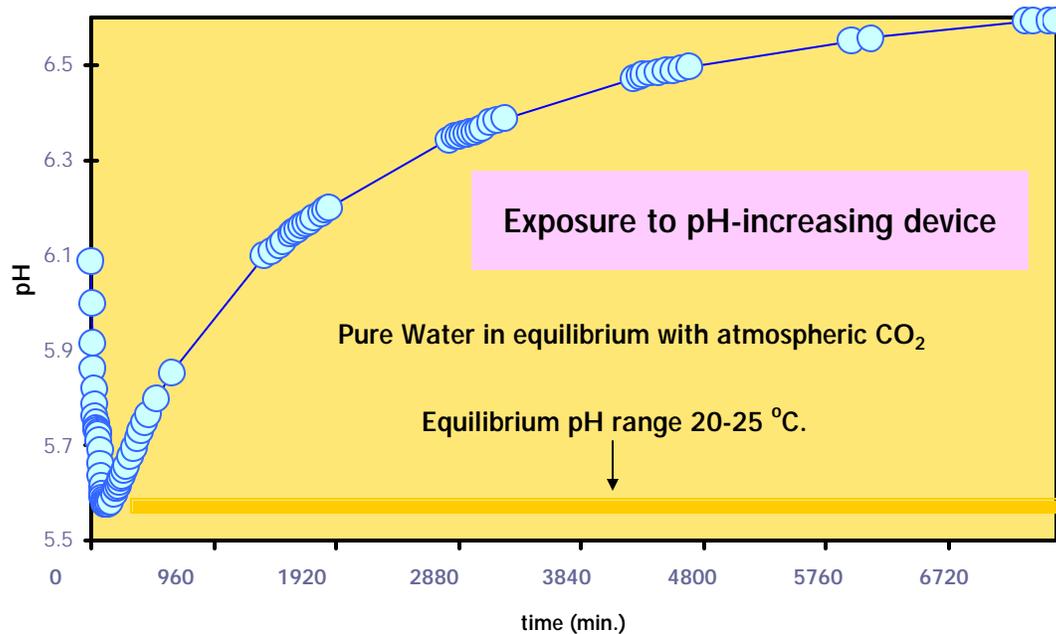

*"To increase the pH of highly purified water in equilibrium with air by one full pH-unit with no chemical additions."* Our equipment measurement accuracy was about  $\pm$  one - one hundredth of a pH unit.

Part B was

*"To decrease the pH of this same type of water in equilibrium with air by one full pH-unit with no chemical additions and the same equipment accuracy."*

- Thus, in this two-part target experiment, we intended to achieve a signal to noise ratio of a factor of  $\sim 100$ . This would be a huge experimental effect - and it was achieved as this piece of data shows

## DpH up by + 1.0 pH unit

- The collective results for these three target experiments showed **unequivocally** that the unstated assumption of establishment science is very, very wrong and that it is time for a major change in our worldview of nature.
- Our subsequent experiments have provided revealing data on how this probably happens. In short, our present working hypothesis is that physical reality consists of two unique levels with a variable degree of coupling between them:
  - (1) our conventional electric, atom/molecule level functioning in spacetime and
  - (2) a coarse physical vacuum, magnetic information wave level functioning in a reciprocal spacetime.

This latter level has a new kind of physics which can be modulated by human consciousness. The output from these IIEDs seem to enhance the coupling between these two levels of physical reality in the laboratory space so that our instruments now measure the **sum** of the normal spacetime uncoupled data response **plus** a coupling coefficient times the physical vacuum level response.

Our working hypothesis is that this is how a specific human intention mentally imbedded into an IIED can significantly influence physical reality!
- Subsequent experiments by us have indicated that humans have their acupuncture meridian/Chakra system functioning at this coarse physical vacuum level while most of the body functions at our electric atom/molecule level. So human intentions are capable of achieving the same kinds of results if they have sufficiently built the necessary internal infrastructure. By diligent internal self-management and “internal infrastructure” building, we believe that a normal human can transform to an adept and then to a Master and then to an Avatar!
